MEDICAL TREADMILL

The Monark Medical Treadmill is designed for medical and rehabilitation purposes. Low entry speed, easy access and long handrails ensure the best usability.

The Monark Novo display together with the possibility to control the treadmill from a third party device (metabolic cart or ECG), enables easy and precise operating.

Monark Exercise develop, manufacture and market cycle ergometers, treadmills and exercise bikes for hospitals, health care facilities, sports medicine institutions and research laboratories. Since the early 1900s, Monark Exercise products have been living proof of precision, reliability, durability, strength and service. We are therefore a world leader in medical training and test equipment and our products are retailed in more than 70 countries worldwide.

MONARK MEDICAL TREADMILL

DIMENSIONS

Total length: 250 cm styre
Total width: 84.5 cm
Weight: 230 kg
Total height: 136 cm
at Display Unit

RUNNING SURFACE

Height to : 17 cm
Length: 158 cm
Width: 52 cm

Max user weight: 250 kg

THE DISPLAY SHOWS

- Current speed in km/h
- Treadmill incline in degrees
- Distance in km
- Time in minutes and seconds
- Pulse (if chest belt is used)

NOTE!

Use of the product may involve considerable physical stress. It is therefore recommended that people who are not accustomed to cardiovascular exercise or who do not feel completely healthy, should consult a physician for advice

FACTS

Monark Medical Treadmill is a Medical device according to Medical Device Directive, MDD 93/42/EEC class IIa.

MONARK MEDICAL TREADMILL

The Monark Exercise Medical Treadmill is an exercise device for walking or running and is primarily developed to be used in a medical environment. The possibility to change and control the speed and inclination of the moving belt which allows the device to be used for training, diagnostics and therapy applications. As the moving belt can be controlled at very low speeds, the Monark Exercise Medical Treadmill is extra suitable for patients who undergo different rehabilitation programs where low speeds are important.

The physical condition of patients can be analysed by through different treadmill stress test protocols, also in combination with a metabolic cart. The Monark Exercise Medical Treadmill is designed for both manual operation and to be controlled via external devices and can then be used as a loading device for ergospirometry, ECG measurements and different stress tests for cardiovascular diseases.

The Monark Exercise Medical Treadmill should be operated by well-trained specialist staff only. The correct loading for a patient on the treadmill must be prescribed and monitored by a medical doctor and/or well-trained medical specialists.

PULSE REGISTRATION

The treadmill has a module that registers the heart rate data from chest belts, or similar, with ANT+ or Bluetooth SMART profile.

We recommend to use a Bluetooth SMART device, e.g. Polar H7, as this allows the treadmill to pair with the heart rate sensor, which ensures a more stable connection.
